| support |  |  |  |  |  |  |  |  |  |  |  |  |
| 13. Age | . 01 | -.17** | .08* | .08* | .22** | -. 01 | -. 04 | -.21** | -. 03 | . 04 | -. 03 | -. 03 |

${ }^{+} p<0.10,{ }^{*} p<0.05,{ }^{* *} p<0.01$
${ }^{\text {a }}$ Relationship satisfaction with non-residing children
b Continuous with $0=$ not satisfied at all and $10=$ very satisfied.

Table S2. Differences in mean level of loneliness for dichotomous variables

| Variable | Mean (se) | F |
| :---: | :---: | :---: |
| Men | 1.81 (0.11) | 1.79 |
| Women | 2.02 (0.12) |  |
| Not having a partner | 2.80 (0.19) | 28.29* |
| Having a partner | 1.72 (0.09) |  |
| Having a disease and/or disability | 2.42 (0.13) | 30.29* |
| No disease or disability | 1.55 (0.10) |  |
| Being retired ${ }^{\text {a }}$ | 2.03 (0.14) | 1.02 |
| Not retired | 1.86 (0.10) |  |
| Being a homemaker ${ }^{\text {b }}$ | 1.52 (0.16) | 6.89* |
| Not a homemaker | 2.03 (0.09) |  |

*p<0.01
${ }^{\text {a }}$ Of the respondents who are retired, $70.7 \%$ are men
${ }^{\mathrm{b}}$ Of the respondents who are homemakers, $99.4 \%$ are women. The variable thus shows the difference in loneliness between women who are homemakers, and women who are not homemakers.

Table S3. Loneliness and migration-background characteristics

|  | 1. | 2. |
| :--- | :--- | :--- |
| 1. Loneliness | X |  |
| 2. Age of migration to Germany | 0.01 | X |
| 3. Years of residence in Germany | -0.01 | $-0.69^{*}$ |

*p<0.01

Table S4. Gender differences in parent-child relationships

|  | Fathers | Mothers |  |
| :--- | :--- | :--- | :--- |
|  | Mean (se) | Mean (se) | $\boldsymbol{F}$ |
| Number of adult co-residing children | $1.01(0.07)$ | $0.87(0.07)$ | 1.95 |
| Number of non-residing children | $1.60(0.10)$ | $1.84(0.10)$ | 2.77 |
| Weekly contact with non-residing child(ren) | $0.59(0.06)$ | $0.76(0.07)$ | $3.70^{*}$ |
| Received emotional support from child(ren) | $0.10(0.03)$ | $0.23(0.04)$ | $9.11^{* *}$ |
| Received emotional support from son(s) | $0.05(0.02)$ | $0.10(0.02)$ | 1.88 |
| Received emotional support from daughter(s) | $0.05(0.01)$ | $0.15(0.02)$ | $13.65^{* * *}$ |
| Low-satisfying relationships with child(ren) | $0.22(0.04)$ | $0.16(0.03)$ | 1.44 |
| Low-satisfying relationships with son(s) | $0.13(0.03)$ | $0.10(0.02)$ | 1.19 |
| Low-satisfying relationships with daughter(s) | $0.09(0.02)$ | $0.07(0.02)$ | 0.68 |
| High-satisfying relationships with child(ren) | $1.34(0.09)$ | $1.66(0.10)$ | $5.59^{*}$ |
| High-satisfying relationships with son(s) | $0.72(0.06)$ | $0.97(0.06)$ | $8.87^{* *}$ |
| High-satisfying relationships with daughter(s) | $0.62(0.06)$ | $0.69(0.05)$ | 0.78 |
| Filial expectations | $3.21(0.06)$ | $3.36(0.06)$ | 2.40 |

${ }^{*} p<0.05,{ }^{* *} p<0.01,{ }^{* * *} p<0.001$

Table S5: Linear regression analysis for social and emotional loneliness

| Variable | Social loneliness ${ }^{\text {a }}$ | Emotional loneliness ${ }^{\text {b }}$ |
| :---: | :---: | :---: |
|  | $\mathrm{B}^{\text {b }}$ (se) | $\mathrm{B}^{\mathrm{b}}$ (se) |
| Constant | 2.05 (0.38) | 0.98 (0.39) |
| Perceived health | -0.13 (0.06)* | -0.15 (0.06)* |
| Having a disease or illness (1=yes) | 0.11 (0.12) | 0.17 (0.11) |
| Income difficulties | 0.07 (0.04) | 0.10 (0.04)** |
| R. receiving emotional support besides children | -0.09 (0.11) | -0.07 (0.10) |
| R. given emotional support to others | -0.11 (0.08) | -0.08 (0.07) |
| Having a partner (1=yes) | 0.36 (0.23) | 0.07 (0.21) |
| High satisfaction with partner (1=yes) | -0.71 (0.22)** | -0.50 (0.20)* |
| Age ${ }^{\text {c }}$ | 0.00 (0.01) | 0.00 (0.10) |
| Gender (1=women) | 0.05 (0.13) | -0.04 (0.11) |
| Being retired (1=yes) | -0.17 (0.13) | -0.01 (0.12) |
| Being a homemaker (1=yes) | -0.39 (0.15)** | -0.03 (0.14) |
| H1. N. adult co-residing child(ren) | -0.11 (0.04)*** | -0.08 (0.04)* |
| H1. N. weekly contact child(ren) | -0.10 (0.06) | 0.06 (0.05) |
| H1. N. low satisfaction with child(ren) ${ }^{\text {d }}$ | 0.23 (0.08)** | 0.16 (0.07)* |
| H1. N. high satisfaction with child(ren) ${ }^{\text {d }}$ | -0.08 (0.04)* | -0.02 (0.04) |
| H1. N. child(ren) giving emotional support | 0.02 (0.11) | -0.02 (0.10) |
| H2. Filial expectations | -0.08 (0.08) | 0.10 (0.07) |
| H2a. Adult co-residing child $x$ filial expectations ${ }^{\text {e }}$ | 0.01 (0.04) | -0.06 (0.04) |
| H2b. Perceived health $x$ filial expectationse | 0.21 (0.06)** | 0.06 (0.06) |
| H2b. Disease x filial expectations ${ }^{\text {e }}$ | 0.15 (0.12) | 0.06 (0.11) |
| H2c. Income difficulties x filial expectations ${ }^{\text {e }}$ | 0.01 (0.04) | -0.06 (0.04) |
| $R^{2}$ | 0.21 | 0.21 |
| $R^{2}$ adjusted | 0.17 | 0.17 |

${ }^{*} p<0.05,{ }^{* *} p<0.01,{ }^{* * *} p<0.001$
${ }^{\text {a }}$ Results of complete cases analysis with $n=533$ for social loneliness and $n=509$ for emotional Ioneliness
${ }^{\mathrm{b}}$ Unstandardized regression coefficients.
${ }^{\text {c }}$ This variable is centered for a better interpretation of respondents who score 0 on age. Mean age $=58.74$.
${ }^{\text {d }}$ Satisfaction with non-residing children
${ }^{e}$ Continuous variables were centered before making the interaction term to avoid multicollinearity. This means that the slope shows the effect of scoring above average on the variables. Mean values are: perceived health= 2.29, income difficulties= 2.94, filial expectations $=3.29$.

Figure S1: Interaction of observed values between loneliness and filial expectations for having adult co-residing children.

Figure S2: Interaction of observed values between loneliness and filial expectations for having a disease and/or disability.

Figure S3: Interaction of observed values between loneliness and filial expectations for categories of having income difficulties.
